Review of possible label errors in a public radiograph dataset

Purpose: a research paper on radiograph body-part classification flagged 39 training images whose given label may be wrong.
Your task (about 30 minutes): for each image, say whether the GIVEN label is correct for the main body part shown.

How to answer: on each case write 1 = given label correct, 2 = given label wrong (write the correct body part), 3 = cannot tell.
Several images show more than one body part; a label is correct if it names a body part that is clearly shown.
Please return the answers in review_answers_template.csv (or on paper). One reviewer is fine.

Notes:
- Images are de-identified, from the public UNIFESP X-Ray Body Part Classification dataset (CC BY-NC-SA 4.0).
- This is not a diagnosis and no patient information is involved. Do not share the images further.
- The model's opinion is hidden on purpose, so that it does not influence you.
